Case Study.

You are working in a company called IDES AG located in Frankfurt, Germany. The company is part of the globally operating IDES group. IDES AG produces and sells digital camera. Assemblies are delivered from plants in Europe and North America. Your company also serves the market with assemblies and spare parts. IDES usually sells to authorized dealers that only sell IDES cameras.

The following describes the overall IDES Group organization structure.

Each of these companies has a clear-cut business task within the corporate group. Furthermore, each company is organized in accordance with the legal and country- specific requirements of the country in which it is situated. For example, the French subgroup is defined solely as a sales and marketing entity, whereas the London subsidiary is used to show how the material ledger is used in countries with high inflation rates. The German and American subsidiaries function as industrial and trading firms. Production, purchasing and sales all take place in both the German and American subgroups. In each of the individual companies, accounting and human resource management have been adapted to these business tasks.

All the business processes in IDES Group are complete business processes. They include all the logistical functions you require (Purchasing, Inventory Management, Production, Sales and Distribution), all integrated into Accounting. In addition to the Financial Accounting functions, you can also use Controlling functions based on overhead costs, costing and profitability analysis. The processes are complemented by Human Resource Management functions and concluding management reports.

1. Purchasing Case

You are working in the Purchasing Department at IDES AG Company. Yesterday, Sales Department informed you about the specifications of [Canon EOS 5D Mark IV](#), [Nikon D5300](#), and [Fuji X-H1 cameras](#) as **new master data** because starting tomorrow there'll be a transaction related to the materials.

This morning, the Sales Department issued a Purchase Requisition form of [20 new Canon EOS 5D Mark IV](#) and [35 new Nikon D5300 cameras](#) that are needed in 2 weeks. It is your responsibility to create the new master data and Purchase Requisition in the System.

Next, in order to purchase the cameras, you need to create a Purchase Order to vendor with the reference to Purchase Requisition in the system. Two weeks later, you'll receive the shipment of the [20 new Canon EOS 5D Mark IV](#) and [35 new Nikon D5300 cameras](#) that you ordered and you shall enter a goods receipt according to the Purchase Order in the System. 3 days after the goods receiving process, an invoice is sent to you from the vendor for the delivery of [20 new Canon EOS 5D Mark IV](#) and [35 new Nikon D5300 cameras](#). You shall perform the invoice verification process in the system.

A week later, Sales Department inform you again that there's a requirement for [40 pcs Fuji X-H1 cameras](#) in a week time. It is your job again to perform the purchasing transaction in the system from the purchase requisition until the invoice verification process.

You can use the following information to create a new master data and purchasing transactions:

No	Description	Data
1.	Material Type	Trading Goods
2.	Plant	Werk Hamburg (1000)
3.	Storage Location	Materiallager (0001)
4.	Sales Organization	Germany Frankfurt (1000)
5.	Distribution Channel	Final Customer Sales (10)
6.	Material Group	Metal Processing
7.	Condition price : Canon EOS 5D Mark IV Nikon D5300 Fuji X-H1	150 EURO 100 EURO 80 EURO

8.	Vendor	BALTUSC-## (2 digit akhir sesuai no user)
9.	Material	T-AS131C## s/d T-AS133C##)
10.	Company Code	IDES AG
11.	Purchasing Organization	IDES Deutschland
12.	Purchasing Group	B##

2. Sales Distribution Case

You are working in the Sales Marketing Department at IDES AG Company. This morning , a potential customer sent 3 inquiries to your company asking about the price and availability of these materials:

Inquiry no	Material Number	Material Description	Quantity
1	T-AS131C##	Canon EOS 5D Mark IV	10
2	T-AS132C##	Nikon D5300	15
3	T-AS133C##	Fuji X-H1	20

Upon analyzing your quotations, your potential customer send you a purchase order consist of 10 Canon EOS 5D Mark IV and 15 Nikon D5300 cameras only and the requested delivery date is in 2 weeks. You need to enter the sales order in the system.

You shall trigger the delivery process by creating a delivery order with packing in the system and after the goods have been received by the customer, you shall perform the goods issue process.

A week later, you shall issue an invoice to your customer from the system for all materials that have been received by the customer.

You can use the following information to create the sales distribution transactions:

No	Description	Data (Description)
1.	Sales Order Type	Standard Order
2.	Sales Organization	Germany Frankfurt (1000)
3.	Distribution Channel	Final Customer Sales (10)
4.	Division	Cross Division
5.	Customer	ROHRERC-##
6.	Plant	Werk Hamburg
7.	Shipping point	Shipping Point Hamburg

3. Production Case

A customer faxed a purchase order for 40 material pumps that need to be delivered in one month and it is your job to enter the order into the system. Unfortunately, that material is not available, so the production process must take place first.

You shall run planned order to determine the material and quantity to be manufactured and the finish date. After creating planned order, you shall convert the planned order into production order and release the production order. After releasing the production order, you shall perform the confirmation process with automatic goods receive.

You shall check your material availability along with stock/ requirement list and stock overview. If the material is available, you can process the delivery and billing process.

You can use the following information to create production transactions:

No	Description	Data
1.	Plant	Werk Hamburg
2.	Storage Location	Fertigwarenlager
3.	Material	R-FC1## (## adalah no user ANDA, misal R-FC105 utk user dg no urut 05 dlm presensi)
4.	Shipping point	Shipping Point Hamburg
5.	Packaging Material	PK-100

4. Finance Accounting Case

Financial Accounting case related to Sales and Distribution

Before doing the exercise you shall observe the financial statement to see the financial data before transaction. Look at the financial statement:

No	Description	Data
1	Company code	IDES AG
2	Fiscal Year	2026
3	Financial Version	INT

Look and write the balance at Profit and loss statement account.

Upon issuing the invoice to customer, the system automatically creates a journal about the transactions before and generate customer open item. Before receiving a payment from customer you must check open item first for the customer. In the customer open item screen you can observe the total of customer RohrerC-## open item and customer RohrerC-## cleared item.

No	Description	Data
1	Customer Account	ROHRERC-##
2	Company Code	IDES AG
3	Open Item Date	Today's Date

After observing the open item, you'll know the total amount of customer RohrerC-## for processing an incoming payment. Upon incoming payment you can see the customer account balance to check the incoming payment before.

First Line Item

No	Description	Data
1	Document date	Today's Date
2	Posting Date	Today's Date
3	Account	113100
4	Amount	-
5	Customer Account	ROHRERC-##

When the transaction is completed, you can generate the financial statement to see the changes about financial accounting data.

No	Description	Data
1	Company code	IDES AG
2	Fiscal Year	2026
3	Financial Version	INT

Look and write the balance at Profit and loss statement account.

Financial Accounting case related to Purchasing

Before doing the exercise you shall observe the financial statement to see the financial data before transaction. Look the financial statement:

No	Description	Data
1	Company code	IDES AG
2	Fiscal Year	2026
3	Financial Version	INT

Look and write the balance at Profit and loss statement account.

Upon receiving invoice from vendor, the system automatically creates a journal about the transactions before and generate vendor open item. Before giving a payment to vendor you must check open item first for the vendor. In the vendor open item screen you can observe the total of vendor **BALTUSC-##** open item and vendor **BALTUSC-##** cleared item.

No	Description	Data
1	Vendor Account	BALTUSC-##
